

WILL MY GRASS STAY GREEN WITH ONE-AP?

eN Efficiency Nutrients
60-120-180

YES, THE SECRET IS IN THE NITROGEN

With *Efficiency Nutrients* nitrogen (N) is released gradually throughout the plant's growth cycle, resulting in precise, predictable feeding that lasts for up to 8 months. Available in four longevities with various release rates, *Efficiency Nutrients* are blended in a specific pattern in order for *One-AP* to last for an entire season in any climate.

HOW IT WORKS: Temperature-Controlled Diffusion

Benefits of Controlled-Release

- Reduced Applications

Using *One-AP* Means avoiding the peaks and valleys associated with multiple applications. This results in reduced soil compaction and reduced total nitrogen fertilizer applications.

- Lower Potential For Leaching Nitrogen

Because the *Efficiency Nutrients* granule is protected by a polymer coating the nitrogen is protected, even under the wettest conditions. Less leaching and less nitrogen helps protect the environment. In fact, recent studies have shown that with *One-AP* nearly all the nitrogen is retained in the grass and upper soil surface. With this technology *One-AP* is able to use up to 40-50% less nitrogen per year.

- Healthier Greener Grass

Extensive testing demonstrates that *One-AP*, with the help of *Efficiency Nutrients*, consistently delivers balanced feeding for stronger, greener & overall well-nourished grass everyday, all season long.
